E: middle.east@ice.org.uk

Established in 1818 in London, the Institution of Civil Engineers (ICE) is the first professional engineering body in the world. Since obtaining its Royal Charter in 1828, it has expanded considerably and now has more than 90,000 members across the world.

Event Overview

Informal Networking Online Session - OPEN to all ICE MENA Student and Graduate Members Only.

This event aims to boost the networking between members of the Institution of Civil Engineers, students and graduate members in the MENA. Preserving the tradition of the Institution of Civil Engineers, which was founded by a group of young engineers at a London coffee shop in the year 1818 and adhering strictly to the UAE government's Covid 19 rules and regulations, this talk is intended to be held virtually. Since the beginning of the pandemic, it was not possible to hold networking events and the concept of a virtual meeting enables members to come together to network, at their own space with a cup of coffee socializing with other engineers.

MS Teams Link will be forwarded to all the registered attendees on Wednesday morning prior to the event. Please note that this is an informal networking discussion session for our ICE MENA Student and Graduate Members Only.

For any specific enquiries regarding ICE membership requirements and processes please contact our ICE Middle East Membership Officer Aurelia Khisaf at aurelia.khisaf@ice.org.uk

Speaker's Biography

Ayman is an International Professional Engineer, Chartered Engineer and Approved Mentor from ICE and Engineers Australia.

He has more than 15 years of experience in international projects in the field of civil engineering, transportation, infrastructure projects and smart cities.

He worked in all the different stages of projects starting from planning, design, review, project management and BIM management. He is also a Project Management Professional (PMP), Autodesk Certified Instructor, Civil 3D and InRoads Professional. He has worked with many international firms and consultants in mega international projects and applied the latest technologies using international standards and other standards as applicable.

Topics he shall discuss:

- **SMART ROADS AND AIRPORTS FOR SUSTAINABLE CITIES.**
- **HOW TO BE A GLOBALLY RECOGNIZED PROFESSIONAL ENGINEER.**
